

OUR MATHS VISION

At Longstone School we endeavour to teach our children a rich and progressive curriculum to build upon their real world understanding and equip them with strategies that will help them make sense of the world. We aim to promote:

- Enjoyment, fascination, resilience and pride.
- Confidence and competence with calculations, reasoning and problem solving.
- Opportunities to explore features of mastery and to apply their knowledge rapidly and accurately.
- A deeper understanding of all mathematical topics by stimulating the children's own interests by 'planting' seeds of wonder.
